Red Panda (Nigel Goodgame)

Introduction.

This was the second WildWings' mammals and bird tour to Sichuan and once again it produced the goods. With an impressive 35 species of mammals and 162 species of birds this is a great destination to see a range of sought-after mammals such as **Red Panda**, **Pallas's Cat** and **Chinese Mountain Cat** along with a wide range of forest and open country birds.

The tour began at Labahe, probably the most reliable site in the world for **Red Panda**. Even though we did not see the numbers as the previous year, we did have prolonged and close views of this endearing species, along with a great supporting cast including **Chinese Serow**, **Chinese Goral**, **Sambar Deer**, **Forest Musk Deer**, **Tibetan Macaque**, **Swinhoe's Striped Squirrel**, **Himalayan (Masked) Palm Civet**, **Himalayan Rat**, and a couple of **flying squirrels**.

Rouergai is the best place I know to find both **Pallas's Cat** and **Chinese Mountain Cat**, and again we were not disappointed. We found three **Chinese Mountain Cats** with one showing very well through

the scopes while we spotlighted on foot one evening. **Pallas's Cat** was seen during the day and again while spotlighting. With '**Tibetan' Wolf, Asian Badger, Tibetan Foxes, Tibetan Gazelles, Blue Sheep, Siberian Roe Deer** *et. al.* this is a must go to location for any mammal enthusiast.

Our final destination Tangjiahe produced some amazing mammal highlights including six sightings of **Northern Leopard Cat**, 12 sightings of **Northern Hog Badger** and nine sightings of **Malayan Porcupine**, all down to a few feet. With the underrated **Takin** along with **Reeves' Muntjac, Wild Boar, Himalayan (Masked) Palm Civet** and other mammals we had a really great time. In addition some of us had a frustratingly fleeting view of a larger cat which after further investigation may well have been an **Asian Golden Cat!**

I would like to thank the group for their great company throughout the trip and for the photographs that accompany this report. Thanks to Sid whose guiding, driving and cooking were outstanding, and the drivers who supported us during a great trip. Their efforts were really appreciated by everyone.

22nd October

We all connected via Frankfurt and arrived in Chengdu early morning. After clearing customs, we met up with Sid and Fugui and quickly left the airport heading for our first location Labahe. After recent road improvements this is now a relatively easy four hour drive and we arrived at our comfortable hotel just before 13:00. After a very quick check-in we were out in the field. Our first stop produced a splendid male Lady Amherst's Pheasant and couple of woodpeckers, plus a very close encounter with a Chinese False Cobra! Our second stop produced our main target: **Red Panda** very close to the road in a lone tree. After a couple of minutes it decided to walk head down from the tree and into the forest. Fortunately we quickly re-found it and were able to watch it feeding and resting for the next hour. Also, present were two **Swinhoe's Striped Squirrels**. After dinner we were back out for our first spotlighting session of the trip. Even though there was a light drizzle for the duration, we had had an excellent session with at least six **Red-and-White Flying Squirrels, Sambar Deer, Himalayan (Masked) Palm Civet, Confucian Niviventer, Himalayan Rat, Chinese Serow, Chinese Goral** and **Forest Musk Deer**, not a bad start!

Swinhoe's Striped Squirrel (Nigel Goodgame)

Chinese False Cobra (Sheila Wright)

23rd October

After our first breakfast at Sid's Cafe we headed back up to the top of the road in Labahe. This is generally the best area for pandas. Leaving the vehicles parked at the top we started walking downhill. With good visibility we scanned the trees for pandas, but the morning was dominated by the birding with very good numbers of warblers, parrotbills, laughing-thrushes, thrushes, redstarts, Spotted Nutcracker, Rufous-breasted Accentor and Wallcreeper.

Reaching a good area for pandas, Sid found a distant **Red Panda** but while he was trying to direct us to it, the panda unfortunately decided to move away and we were unable to re-find it. We spent the rest of the day in field but pandas remained elusive. We did manage to find **Pere David's Rock Squirrel**, a few more **Swinhoe's Striped Squirrels**, and **Tibetan Macaques**.

Back at the hotel we decided to rest before dinner but a quick look at the river did produce Little Forktail, Brown Dipper and numerous Plumbeous Redstarts and White-capped Water Redstarts.

After dinner we went back out for our second spotlighting session. Our first stop at one of the hotel lakes produced **Chinese Water Myotis**. Further down the road we had excellent views of five **Masked Palm Civets**, a family group of **Chinese Goral**, **Sambar Deer** and **Chinese Serow**, good numbers of **Red-and-White Flying Squirrels** with one showing well in full view and another **Confucian Niviventer**. It had been another very enjoyable spotlighting session.

24th October

A 05:00 start found us out spotlighting again! A short two hour drive produced **Sambar Deer**, **Masked Palm Civet**, **Red-and-White Flying Squirrels**, and a very agile **Northern Leopard Cat** that Sid saw in the spotlight for a few couple of seconds.

Back to the hotel for a quick breakfast, we then headed back up the mountain for more pandas. While driving to the best location, Chris located a **Red Panda** in a lone tree just off the road. We all piled out of the cars, and then spent the next 90 minutes watching it at close range in brilliant sunshine, the panda moving up and down the tree feeding very slowly on berries.

Highly satisfied with great views of the panda we then searched another track off of the main road for Temminck's Tragopan but we were unsuccessful in our quest. Birding was a little quiet, but we did see Darjeeling Woodpecker and Sichuan Treecreeper.

We returned to the car for lunch and then birded the road, but there was surprisingly little to see. Happy with what we had seen, we went back to our hotel. Some of the group decided to rest, while the rest of the group went looking for birds and mammals, but it remained a little quiet.

After dinner we then headed out for another spotlighting session. We enjoyed excellent views of **Chinese Serow** on the road, along with **Chinese Goral** and the common **Red-and-White Flying Squirrels**. A drive along the cliff produced two close views of **Parti-coloured Flying Squirrels**. On the drive back, some of us saw a **Northern Leopard Cat** but despite spending some time trying to re-find it, we were unable to do so.

Parti-coloured Flying Squirrel
(Chris Grimmett)

Tibetan Macaque (Chris Grimmett)

25th October

Another pre-dawn spotlighting session produced another excellent view of **Chinese Serow**. We tried again for the Northern Leopard Cat but unfortunately drew a blank. After a couple of hours, we went back to the hotel to Sid's Café before we had our last birding session. We walked along the river for a couple of hours which produced fantastic views of four Little Forktails, Brown Dipper, White-backed and Darjeeling Woodpecker along with introduced **Red Deer** and **Tibetan Macaque**. Back at the hotel we packed the cars for our journey back towards Chengdu. A stop on route to the gate, added a few birds to the list - Brownish-flanked and Yellowish-bellied Warblers, Little Bunting and Hodgson's Treecreeper.

We continued our way and had a quick stop at Tian Quan Lake where we found Black-necked Grebes, Mandarin Ducks, Long-tailed Shrike, Bluethroat and several other water birds. We arrived at our hotel in Dujiangyan and had a fantastic local dinner. Afterwards we drove to a nearby park to try for owls but being a full moon, we could not locate any owls apart from hearing a distant Northern Boobook.

26th October

We got up early for the short drive to the local park in Dujiangyan to look for **Pallas Squirrel**. Arriving at dawn we could hear the squirrel but could not locate it but after a little perseverance we did manage to see it. We then drove back to the hotel for a quick breakfast and to pack the cars for the long journey to Rouergai.

We refuelled, had a lunch stop near Songpan and headed towards the Tibetan Plateau. We arrived at our hotel around 19:00 and had a quick dinner at 'Sid's Café' before heading out on the road for a spotlighting session at a nearby site. We quickly spotted out first **Red Fox's** and three **Siberian Roe Deer** plus **Woolly Hare**. Just as we turned around to head back, Nigel picked up some eyeshine in the spotlight, which was probably a Chinese Mountain Cat, but it could not be relocated.

27th October

Excited about our previous evenings spotlighting we were out again prior to dawn. We arrived at one of Sid's favourite sites and we parked-up and took a short walk up a hill to see if we could locate any cats. As soon as we arrived we spotted eyeshine, it was our first **Tibetan Fox**. We spent an hour scanning the ridges, but it soon came apparent that there were too many Yak herders. We decided to relocate to another site but not before we had found **Tibetan Fox**, lots of Himalayan Griffon's, Black-necked Cranes and our first of 1000s of **Black-lipped (Plateau) Pikas**.

At our second site we soon found 18 **Tibetan Gazelles**, and there were birds everywhere, White-rumped and Rufous-necked Snowfinches, Horned Larks, Guldenstadt's Redstart, Oriental Skylark and Plain Mountain-finches. While scanning for mammals, Sheila noticed several snowfinches making a fuss. When we scoped the birds, they were mobbing a striking **Asian Badger**! We had great views for five minutes before it disappeared back down its hole only to reappear 10 minutes later, much to the delight of Mike.

We continued down the road into a spectacular gorge, which produced Lammergeier and numerous Himalayan Griffins, Hill Pigeons and two Sukatchev's Laughingthrushes. We reluctantly headed back to Rouergai for a late lunch, but not before we had excellent views of another **Tibetan Fox** and more Black-necked Cranes.

After a short rest, we were back out on the road where we had been earlier in the day for another spotlighting session. The first mammals seen were **Tibetan Fox** and during the evening twelve were seen. However, during the spotlighting session the snow started to descend which made spotlighting a little challenging. We staked out a site for Pallas Cat but due to the snow we decided to drive back down the mountain and try another location, we had been to earlier in the day. We parked the car and took a short walk to stake out a few hills. With spotlights scanning the hillside, Sid picked up eyeshine in the distance, so we slowly walked to the eyeshine. With telescope ready we could make out that we were watching our first **Chinese Mountain Cat**! Thankfully, it descended towards us, and then sat watching us in full view. After, a few minutes it stood up and moved a few metres and laid down. We watched it in full view for 25 minutes. Excellent.

We returned to our hotel for well-earned rest, but the drive back was a little slow as the snow had started to come down a little harder.

Himalayan Griffon (Nigel Goodgame)

Saker (Chris Grimmett)

28th October

Again, another early spotlighting session and thankfully the previous night's snow had all but disappeared, but it was a little cold. We headed out to the main area for Pallas Cat but sadly, again, we could not find it, but we did see more **Tibetan Foxes** and **Tibetan Gazelles**. After a picnic breakfast we moved to another location for the cat but there was a little too much human activity, so decided to take a slow drive back to town. On route we come across a very high number of raptors on the move. The commonest species was Steppe Eagle but we also saw Hen Harrier, Kestrel, Himalayan Buzzard, Saker, Himalayan Griffin and Upland Buzzard. Other birds found included good numbers of Robin Accentor, Tibetan Shrike and Oriental Skylarks.

After lunch we went back to the hotel for rest ready for the next spotlighting session!

Our evening spotlighting session took us back to the Pallas's Cat quarry. We arrived 45 minutes before dark which gave us time to scope the quarry and ridges for mammals. Apart from **Tibetan Fox** we had to wait until dark to locate any cats. Within 15 minutes of it being dark there was eyeshine in the quarry. The first three mammals found in the spotlight were **Red Foxes**, then bingo, the next set of eyes were a male **Pallas's Cat**! We had excellent scope views while the cat just sat there preening and looking at us. After 30 minutes we left the cat in peace hoping for daylight views in the morning.

An early night was well needed, and we headed back to the hotel for a beer and well-earned rest.

Black-lipped (Plateau) Pika
(Chris Grimmett)

Asian Badger (Nigel Goodgame)

29th October

A late start found us at Sid's Café for breakfast before the drive back to the quarry hoping to re-find the cat in daylight. We arrived at the same spot as the previous night and within a few seconds we found the **Pallas's Cat** in the same location. It just sat there preening in the sunshine. After a few minutes it decided to take a slow amble up the hill in full view before disappearing in the grass to sleep. In the meantime, Sid stayed with car and was scoping the grasslands for wolf. A call on the radio from Sid confirmed that he had found two distant **(Tibetan) Wolves** and we dashed over to the scope to view them while hoping for closer views later. During the morning session four **(Tibetan) Wolves** were seen, with one showing well, along with two **Tibetan/Red Foxes**.

We took an early lunch back in Rouergai and then back to the hotel. An early departure found us heading towards the forests and hillsides for a spotlighting session.

We stopped a few times scanning the hillsides for ungulates and pheasants but were unsuccessful. On the bird front Godlewski's Bunting, White-browed and Pink-rumped Rosefinches and Brambling were fairly common. After a quick field dinner, we were back in the car for another spotlighting session which produced 10 **Woolly Hares**, **Red Fox**, **Sika Deer** and a nice surprise an unexpected **Chinese Mountain Cat**.

Pallas's Cat (Nigel Goodgame)

**White-rumped Snowfinch
(Chris Grimmett)**

30th October

We woke to find snowy conditions and icy roads. Sid and I took the decision to err on the side of caution and wait until the roads were a little safer to drive on. We finally left our hotel at 10:30 and drove to Baixi. Our first stop in Baixi produced six Blood Pheasants trying to find snow-free areas under the trees. At our next stop we took a short walk through the forest but it produced very little new for the trip. We decided to head back to Rouergai for lunch but not before we saw 32 Himalayan Griffin's digesting their latest meal. After lunch we drive to the Gansu road and the gorge to look for mammals and to spotlight on the way back. Our first scan produced **Tibetan Foxes** and **Gazelles** and Rose found another **Asian Badger** which a nice surprise, but sadly it did not hang about. We drove on and stopped at the top of the gorge and scanned the mountain tops. This produced three **Siberian Roe Deer** and over 100 **Blue Sheep**. We drove to the bottom of the gorge and found five Blue Eared Pheasants close to the road.

We stopped for a field dinner and once it got dark drove back up the gorge scanning the trees for eyeshine. After around 20 minutes we found our first eyeshine, but we could not get a proper view to identify the species. Shortly afterwards we managed to get a view of **Northern Chinese Flying Squirrel** but unfortunately the views were not the best. Just before leaving the gorge we found a group of 5 **Chinese Goral**. Back on the plateau we saw two **Red Foxes**, our first **Wild Boar** of the trip, at least 10 **Tibetan Foxes** and yet another **Chinese Mountain Cat**. This was our last session on the plateau and been highly successful.

31st October

We left Rouergai for the long drive to Tangjiahe. We decided not to stop too often to ensure we arrived in plenty of time to ensure we could optimise our spotlighting opportunities. We did however stop a couple of times and this produced Eastern Buzzard, Collared Crow and a flock of over 250 Grandala. We stopped for lunch just north of Pingwu and then drove to Qingxi, the last town before the reserve to pick-up supplies for the next couple of days.

We arrived at the reserve in plenty of time and had a quick look for mammals on the way up to the hotel and found our first **Takin**. We booked into our very comfortable rooms and had dinner in Sid's Café. We started spotlighting at 20:15 and our first mammals of the night were **Takin** and **Reeve's Muntjac**. Both mammals are very common in the reserve. Our next encounter was a **Himalayan (Masked) Palm Civet** and **Chinese Goral**. We continued on and a **Northern Leopard Cat** obligingly ran towards the car and sat on a bank for all to view! Excellent. We carried on driving with **Wild Boar**, **Chinese Serow** and more **Takin** and **Reeve's Muntjac**. At the bottom of the road we turned around and drove slowly back. Our next mammal was a **Northern Hog Badger**, which ran up the road before moving into the undergrowth. We carried on spotlighting before we bumped into a **Malayan Porcupine**. A couple of **Confucian Niviventer** and another **Northern Hog Badger** along with two more **Himalayan (Masked) Palm Civets**. We drove just past our hotel and Nigel spotted eyeshine on the other side of the river. We stopped the car and decided to set-up scopes too see what it was. It turned out to be another **Northern Leopard Cat**. We observed it for over 15 minutes as it sat and watched us on a rock in full view. We returned to our hotel and just as we arrived at the car park, two **Takin** decided to have a head banging session with each other. It was very impressive. We finally finished spotlighting at 23:55. A truly amazing session, with some of the group saying this was their best spotlighting session ever!

1st November

After the marathon session the previous night we took a short drive to look for Asiatic Black Bears which had been feeding on Kiwi fruit the previous week, but we could not locate them. **Pere David's Rock Squirrel** was found along with a few new birds for the trip. We returned to the hotel for breakfast of homemade pancakes and porridge at Sids Café. We then set out for a walk to look for monkeys. The weather and scenery were excellent, but we could not find any monkeys. Two more **Pere David's Rock Squirrels** were seen and again new birds for the trip. We walked back to the hotel for lunch and a rest before we set off again at 16:30. It was a little quite on the mammal and bird front, but Mike and Rose found a nice male Golden Pheasant.

Pere David's Rock Squirrel (Nigel Goodgame)

Brown Dipper (Nigel Goodgame)

The evening spotlighting session was another respectable session. With no new mammals for the trip but very good views of four **Malayan Porcupine**, two **Northern Leopard Cats**, two **Himalayan (Masked) Palm Civets**, 12 **Takin**, three **Chinese Goral**, two **Wild Boar**, and a staggering six **Northern Hog Badgers**.

Takin (Nigel Goodgame)

Northern Hog Badger (Nigel Goodgame)

2nd November

With no rest for the wicked at 05:00 we were back on the road for another spotlighting session. This time it was a little quieter. Two more **Northern Hog Badgers** were seen along with the usual suspects of **Himalayan (Masked) Palm Civet**, **Takin** and **Reeve's Muntjac**.

Back to the Sid's Cafe for breakfast our next encounter we took the bus to the top of the mountain in search of Golden Snub-nosed Monkey but on this occasion, we were not in luck, but not for the lack of trying. A few new birds were seen including Sooty Tit, Crimson-breasted and White-backed Woodpecker, Golden-breasted and Speckled Fulvetta and Bar-tailed Treecreeper.

After a fairly long 11.3 kilometre walk back to the hotel we took a well-earned rest and lunch after which we took a short walk around one of the trails from the hotel. This produced another close encounter with **Chinese Serow**, **Chinese Goral** and **Pere David's Rock Squirrel**. Our last evening spotlighting session took us down the now familiar forest road and again produced excellent views of two **Northern Hog Badgers**, two **Northern Leopard Cats**, four **Malayan Porcupines**, 14 **Takin** along with the other usual suspects. However, we did have a new species in the form of a **Chinese Birch Mouse**. We also had a very brief encounter with a large cat which based on additional investigation back home was probably an **Asian Golden Cat**, but our views were far from conclusive.

Chinese Birch Mouse (Chris Grimmett)

Malayan Porcupine (Chris Grimmett)

3rd November

Our final morning found us up and out again at 05:00 for our final spotlighting session. We added nothing new to the list but still enjoyed seeing **Northern Hog Badger**, **Himalayan (Masked) Palm Civet** and the usual ungulates. Back at the hotel we had our final breakfast at Sid's Café before loading the vehicles for the drive back to Chengdu.

We did have a quick lunch stop and a river stop which produced six Long-billed Plover along with a few new birds for the trip. We eventually arrived at our hotel around 18:00. We only had a few hours in the hotel, but this gave us time for a series of toasts and time for shower before the shuttle bus took us to the airport, with Mike and Rose taking an internal flight to Beijing. This ended a highly successful second WildWings' tour to Sichuan.

Nigel Goodgame.

Bird List

			Labaha	Rouergai	Tangjiahe	Journeys
1	Ruddy Shelduck	<i>Tadorna ferruginea</i>		X
